

Winner Designs Wooden Stiletto

Do you love a good stiletto like I do?! Many of you use one solely at the sewing machine. But I find it really helpful when combined with my iron! If you like that, too, the No Gloss option doesn't make a sticky mess from the heat that might affect your fabric or batting.

Gloss shows off the grain of the wood whereas the No Gloss Stiletto might initially look dull in comparison. I prefer No Gloss because I want to use it with my iron without worry. 'Practical' is more important to me than 'pretty'!

Choose the **Finish** you'd like: Gloss or No Gloss. Choose the **Style** you'd like: Simple or Decorative

Gloss or No Gloss?

Using at the sewing machine and never plan to use it with your iron? Choose **Gloss**. Using with your iron, too? Choose **No Gloss**.

Simple or Decorative?

Choose based on which LOOK you like best then choose based on PRICE. **Simple** is less expensive because it takes less time to make.

Several of you asked what you'd do with a Stiletto. Below is a short list; I know you'll find more uses, too! Check out my "[Wooden Sewing Stiletto](#)" Video at www.YouTube.com/LindaVideos

How to use this Stiletto:

- Use at the Sewing Machine, Serger, Embroidery Machine, Cutting Table and Ironing Station
- Perfect for quilters, sewers & crafters
- Turn, stuff, press, push, prod, shove, guide, hold, fold, flip, manipulate, poke, crease, & more
- Perfect for near your sewing needle & hot iron
- You've got an extra hand
- Helpful when working with gradual curves
- It's a bit longer than most stilettoes making it easier to work inside a project
- Wrap ribbon, thread, twine around the stiletto

Use the Pointed/Tapered End to:

- Pointed end is sharp enough to turn corners but not too sharp.
- But... be careful not to push too hard to or you might poke through the fabric!
- Poke out stubborn corners, collars, turn out & stuff doll arms & legs
- Hold stubborn or difficult fabric near the sewing needle
- Helps with ribbon embroidery

Use the Flat/Angled Edge to:

- Tapered end is wider and angled with a flat edge making it very versatile!
- Use with OR without your iron
- Great at dangerous spaces – heat of the iron or under the needle
- Guide and feed fabric under the presser foot
- Helpful at the beginning of sewing to push fabric
- Fold over fabric
- Great for finger pressing
- Press seams open or to the sides
- Helpful when creating and working with bindings
- Hold stubborn or difficult fabric near sewing needle
- Keep fabrics aligned at the sewing machine
- Turn under applique edges
- Create crisp folds, corners
